

ConCreate™

Creative by design.

Part of the Performx® series of mixes available from Heidelberg Materials, ConCreate provides design solutions with a variety of colour combinations suitable for stamped and exposed finishes, coloured borders, variegated or translucent colour effects and geometric patterns.

Enjoy the strength and durability of concrete combined with the impact and attractiveness of custom decorative finishes with ConCreate.

Customized surfaces

Coloured ConCreate

Compatible with a variety of finishes, coloured concrete is both practical and esthetically pleasing. Explore the design options available through various colour combinations.

Stamped ConCreate

Stamped concrete is fast becoming the decorative finish of choice for homeowners, builders and architects. By “stamping” three-dimensional patterns into coloured concrete, the concrete can be transformed to replicate the natural beauty of slate, cobblestone, brick, tile or various other designs.

Exposed ConCreate

Exposed aggregate finishes are highly versatile and often used to complement a stamped finish or plain concrete. Rugged and resistant to heavy traffic, exposed aggregate finishes boast low maintenance as well as natural beauty.

ConCreate care

Protect your investment by utilizing these easy care tips to keep your coloured concrete looking great.

Concrete sealers

Concrete sealers help protect concrete from damage due to exposure to de-icing agents and freeze/thaw cycles while repelling oil, grease, water and stains.

- Seal your concrete with a quality sealer.
- It is imperative to apply the sealer during the first year after your concrete has been placed and prior to the first frost.
- A regular re-sealing program should be scheduled every one to two years.

Cleaning

- Schedule periodic cleaning to avoid the gradual accumulation of dirt. The most effective method of cleaning your ConCreate surface is chemical-free, low-pressure power washing.

Snow & ice removal

- Snow and ice should be removed with a plastic snow shovel.
- Avoid the use of de-icing salts.
- Refrain from ice chipping.
