

## Colored Cements for Masonry

### Make an Impact with Colored Mortar

Your selection of colored mortar can make a vivid impact on the look of your building. Mortar joints comprise an average of 20 percent of a brick wall's surface. Your selection of flamingo cement can dramatically enhance this surface with an eye-catching spectrum of color choices.

### Masonry Products that Endure the Test of Time

Flamingo color masonry cements are manufactured to the most exacting standards in our industry and uniquely formulated to provide strength, stability and color fastness to endure for generations. Our products are manufactured with the highest-quality iron oxide pigments, which provide consistent color quality throughout the life of the structure. All products are manufactured to meet the appropriate ASTM specifications.

Heidelberg Materials recommends constructing a sample panel prior to construction and/or placing an order for color. Field conditions and sand will affect the finished color.
