Heidelberg Materials Fuel Rate Adjustment:

The Fuel Surcharge (FSC) is calculated using the retail diesel price for Edmonton, including all applicable taxes, as published on the Kalibrate website. Kalibrate is used as the data source because its retail pricing reflects fluctuations in provincial and federal taxes—such as the carbon tax—which are not captured in wholesale fuel rates.

Effective April 1st, 2022, the FSC will be based on the **average Edmonton retail diesel price from the 25th of the previous month through the 24th of the current month**. The updated FSC will be **published immediately after the 25th of each month** and will take effect on the **1st day of the following month**.

Below is the updated FSC schedule based on the corresponding average retail diesel rate:
